

## DESIGNING THE SOLUTION

# FINAL DESIGNS

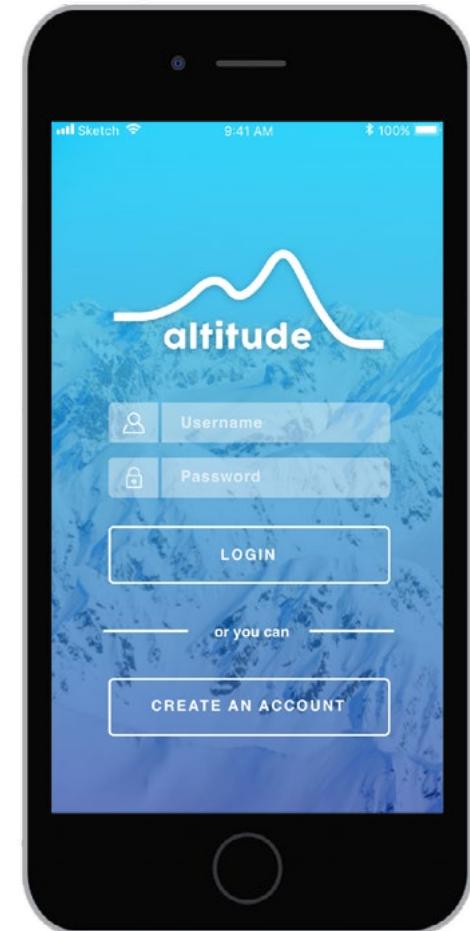

---

After the mid-fidelity digital wireframes, I created my final high-fidelity designs. These designs were created using Sketch. I chose to use Sketch as it is industry standard software that I wanted to gain experience in and I knew the use of creating symbols, for example the navigation bar, would allow me to create consistent designs. I decided on the final name as “Altitude Snow-sports”, commonly referred to as simply “Altitude” and colour palette with colours associated with skiing.
